

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

**Oberholser on *Larus hyperboreus barrovianus*.**<sup>1</sup>—In this paper, Dr. Oberholser again comes to the support of the Pt. Barrow Gull, a form originally separated from the Glaucous Gull by Mr. Ridgway in 1886 as a full species and so recognized in the second edition of the A. O. U. 'Check-List.' In 1906 after a study of a large series of these birds Dr. J. Dwight came to the conclusion that the alleged differences were not sufficiently marked to warrant recognition of *Larus barrovianus* and reduced the name to a synonym of *L. glaucus* [= *hyperboreus*] a view that was endorsed by the A. O. U. Committee and it was omitted from the third edition of the 'Check-List.' In 1918, Dr. Oberholser in an elaborate paper published in 'The Auk' proposed to resurrect it as a subspecies, a view which Mr. Ridgway, the original describer of the form had failed to take in his 'Birds of North and Middle America' the eighth volume of which, containing the Gulls appeared the next year. Dr. Dwight promptly met Dr. Oberholser's attempt at resurrection with an additional attack on the validity of the form and Dr. Oberholser now reappears in defence. All of this only demonstrates that with the same material available two or more authorities will have opposite opinions upon the recognition of subspecies based upon such finely drawn distinctions as are now so prevalent in systematic work. There is no "right" or "wrong" in such questions, it is simply a matter of personal opinion. The only fair way of treating such cases in our Check-Lists, it would seem, would be to state both views. Any other method obscures the facts in the case.—Dr. Oberholser's final argument, that a number of ornithologists to whom he had pointed out the characters of *L. barrovianus* agreed with him, reminds one of the *auctorum plurimorum* principal once so popular in discussing problems of nomenclature! — W. S.

**Contributions to the Zoogeography of the Palaearctic Region.**<sup>2</sup>—This issue is the first part of a new publication and contains two papers by Erwin Stressemann on the forms of the group *Ægithalos caudatus* and their hybrids, of which *Æ. c. romanus* (p. 10) from Rome is described as new; and on the European Bullfinches with a chart of their evolution.

Of the former group he recognizes fourteen pure-blooded forms, which he divides into three groups, and five hybrids. There is much discussion upon the nature of these forms.

Of the Bullfinches there are five races and one hybrid. Just where the recognition of so many natural hybrids in addition to subspecies is going to lead us it is hard to say.

In America there seems to be but little necessity for such a hypothesis
